Billing providers that don't require rendering provider NPI or taxonomy

There are certain billing providers that do not require a rendering provider NPI and taxonomy on the claim. Including unnecessary rendering provider information on these claims initiates a manual review and slows down the claims processing time and payment. An additional reminder, "Rendering Provider" information on the claim is for practitioner information only, not the location where the service was rendered.

A current list of the most common billing providers that **do not** require a rendering provider NPI and taxonomy on the claim is available on UCare's [Claims and Billing](#) webpage under "Taxonomy Requirements."

For additional information on taxonomy, please visit the [Claims & Billing](#) webpage, the [Resources for Electronic Transactions](#) webpage and the [Electronic Data Interchange](#) chapter of the UCare Provider Manual.
